SENNHEISER IS 410 INFRARED TV HEADPHONE SYSTEM

TV listening systems are designed to help you enjoy your favourite shows. The IS 410 improves the signal-to-noise ratio by enabling binaural listening (hearing with both ears) and lessening the gap between speech source and aural perception of the audio signal. The independent volume control, from one ear to the other, lets you set the sound to the level that suits you best, without disturbing others in the same room. The system can also be directly connected to your stereo system or radio.

With the IS 410, you can adjust the sound of your TV or favourite music without bothering others. The IS 410 is an ultra-lightweight infrared stereo stethoset headphone system offering impressive sound quality.

The transmitter connects easily to any signal source (TV, radio). Using the IS 410 is easy, the headphones switch on automatically when they are put on! Balance and volume are set directly on the stethoset headphones. The transmitter also features a compression button for further enhancing speech intelligibility.

BENEFITS

- Ideal for TV sound transmission;
- Cordless infrared system with excellent sound quality;
- Transmits sound within a room, at a distance of up to 12 metres.
